Discover the **OF[®] Arowana Series** — the ultimate specialist treatments from Qian Hu Corporation Limited, backed by over 20 years of expertise in rearing and breeding Asian Arowanas. Ensure your majestic Dragon Fish stays healthy, resilient, and radiant with our trusted solutions designed to combat common diseases early and effectively. Give your prized Arowana the care it deserves and preserve its elegance, power, and nobility.

OF® AROWANA ANTI-DROPSY CAPSULES

- Specially formulated to treat Dropsy
- Safe and effective
- Easy to use

Physical and Behavioral Symptoms	Symptoms vary widely. A common sign is when the scales protrude outwards giving the Arowana a pine cone appearance; hence it is also commonly known as "Protruding Scales Disease". Other physical signs include swollen belly, bulging eyes, swollen and red anus, feces is pale and stringy, gills become pale, and/or spine may be curved. Behavioral signs in the Arowana include Lethargy, laborious breathing, 'hanging' at water surface, clamped fins, and/or anorexia (loss of appetite).
Causes	Dropsy is often an infection caused by Gram-negative bacteria that are commonly present in all aquariums. Healthy fish rarely fall prey to Dropsy. Prolonged stress exposure, poor water conditions, Ammonia or nitrite spikes, sudden drop in water temperature, improper nutrition and aggressive tank-mates are some of the contributory factors that lowers the fish immunity.
Treatment	Check and improve water quality if needed. Ensure that the fish is not already in severe disease condition due to other disease agent. Application of OF® AROWANA ANTI-DROPSY CAPSULES as shown in dosage below.
Dosage	1 Capsule treats 50 Litres of water (aeration required). Treat fish on a 3 day interval until the symptoms subside.

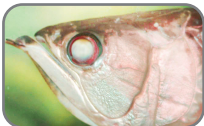

IMPORTANT

Please remove all absorptive media like activated carbon and zeolite, etc. from the filtration system as these will affect the medication's effectiveness.

WARNING!

- For fish treatment only. Not for human consumption.
- Keep out of reach of children.
- Observe fish for any signs of distress after dosage. Conduct water change immediately if fish shows signs of distress.
- Store in cool, dry place.

OF® AROWANA ANTI-CLOUDY EYE CAPSULES

- Specially formulated to treat Cloudy Eyes.
- Safe and effective
- Easy to use

Physical and Behavioral Symptoms	Cloudy white film or grey 'haze' that forms over the Arowana's eye(s) causing the affected eye to appear opaque or slightly opaque. Cloudy Eyes in severe cases will even show as fungal growth on the surface of the eyes. Treatment must be carried out as it may lead to secondary infection and cause blindness if not treated early. Behavioral signs in the Arowana include signs commonly associated with a loss of vision, anorexia (loss of appetite, lethargy and agitation, fish will attempt to rub against rough surface to decrease the irritation.
Causes	Various bacterial organisms (non-specific), severe stress, poor water conditions, malnutrition, cataracts, old age, hyper-production of slime due to poisoning, irritation, and/or abrasion due to external infections.
Treatment	Check and improve water quality if needed. Ensure that the fish is not already in severe disease condition due to other disease causing agent. Application of OF® ANTI-CLOUDY EYE CAPSULES as shown in dosage below.
Dosage	1 Capsule treats 50 Litres of water (aeration required). Treat fish on a 3 day interval until the symptoms subside.

IMPORTANT

Please remove all absorptive media like activated carbon and zeolite, etc. from the filtration system as these will affect the medication's effectiveness.

WARNING!

- For fish treatment only. Not for human consumption.
- Keep out of reach of children.
- Observe fish for any signs of distress after dosage. Conduct water change immediately if fish shows signs of distress.
- Store in cool, dry place.

OF® AROWANA ANTI-COLUMNARIS (FIN ROT) CAPSULES

- Specially formulated to treat Columnaris (Fin Rot)
- Safe and effective
- Easy to use

Physical and Behavioral Symptoms	<p>Columnaris (commonly known as fin rot and often mistaken for a fungus being characteristically white and patchy or fish fights) is usually presented near the head and fins of the body. There are various patterns of appearance which includes white, clear, red/pink areas of necrosis on the body, frayed and ragged fins and development of inflamed areas and sometimes deeper ulcers. This disease is highly contagious and will quickly prove fatal to the infected fish if left untreated.</p> <p>Behavioral signs in the Arowana include lethargy, laborious breathing, 'hanging' at water surface, hiding behavior, clamped fins, and/or anorexia (loss of appetite).</p>
Causes	<p>Various organisms where positive diagnosis is not possible outside of lab culture and microscopy, hence identification is not practical for most hobbyist:</p> <ul style="list-style-type: none">• caused by highly virulent Gram-negative bacteria known as <i>Flavobacterium columnare</i>.• Bacteria enters fish usually through the gills, buccal cavity or small wounds.• This bacteria is ubiquitous in water and outbreak is often caused by high bioload or stress conditions (e.g. Overcrowding, low dissolved oxygen or bad water quality).
Treatment	<p>Check and improve water quality if needed. Ensure that the fish is not already in severe disease condition due to other disease agent. Application of OF® AROWANA ANTI-COLUMNARIS (FIN ROT) CAPSULES as shown in dosage below.</p>
Dosage	<p>1 Capsule treats 50 Litres of water (aeration required). Treat fish on a 3 day interval until the symptoms subside.</p>
